

Army Medical Equipment Reset Information Brief

US Army Medical Materiel Agency
(USAMMA)

03 April 2009

Purpose

To provide customers, stakeholders and partners an overview of the MEDCOM / USAMMA Medical Equipment Reset Program in support of Army Force Generation (ARFORGEN).

Medical Equipment Reset Intent

Medical Equipment Sets

1999-2000 UA Series

2006 UA Series

Equipment items

LifePak 10

Zoll Defibrillator

Introduction & Background

❖ ARFORGEN:

- “a process — enhancing the Army’s ability to provide combatant commanders with whole, cohesive, ready units while increasing predictability and reducing uncertainty for Soldiers and their Families.” *ACP 2008 PLANORD, 29 FEB 08*
- USAMMA is the Medical Equipment integrator for ARFORGEN

❖ Reset:

- Major component of ARFORGEN process; is rapidly evolving
- Requires tremendous administration, reporting and coordination with Army-wide stakeholders and customers

❖ Funding:

- FY07: Army spent \$17.1B on Army Reset Programs, \$13.6B in FY 08
- FY08: MEDCOM established first ever, Sustainment-Level Reset Program
—\$73.1M Sustainment-Level program initially focused on BCT / Enabling BDE Reset

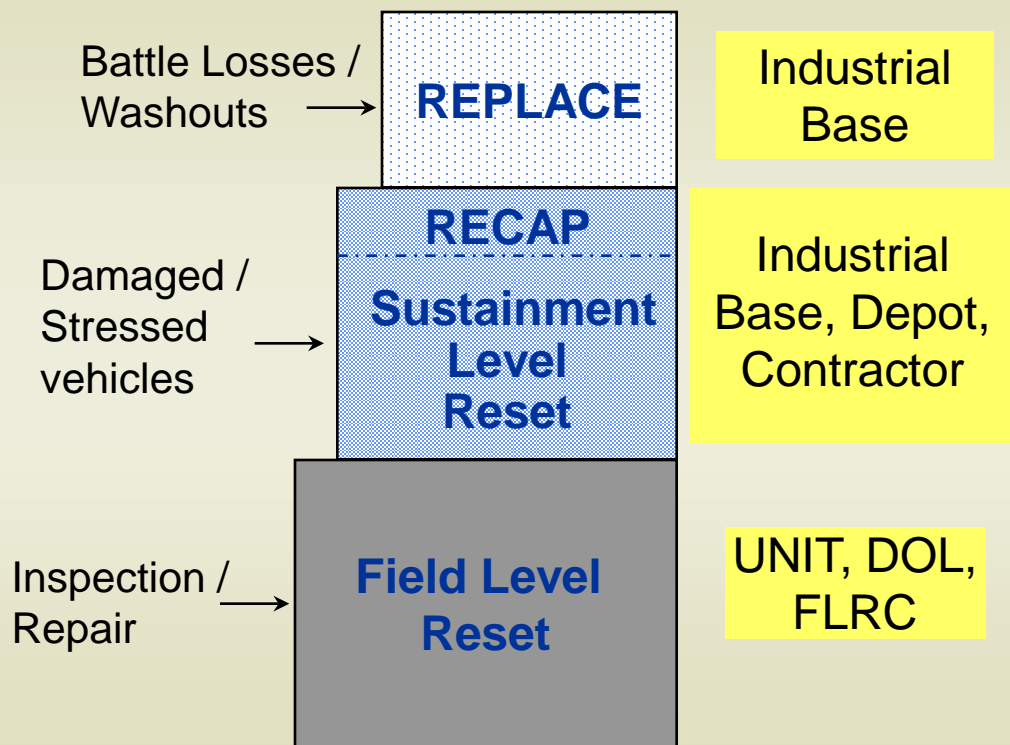

Army Reset Overview

Restore equipment to a desired level of combat capability commensurate with a units' future mission.

RESET

Sustainment Level RESET

- **National Program:** – GS or Depot Level Repair performed by an LCMC Depot Program or Original Equipment Manufacturer (OEM).
- **Repair Standard:** Overhaul, Recapitalize, Rebuild to the national maintenance standard.
- **Funding Project Code:** 9HN

Field Level RESET

- **Unit/Installation Program:** Organizational or DS Level Repair performed by unit or installation service providers such as DOL or FLRC. Also includes select LCMC teams such as SARET-R performing Field Reset.
- **Repair Standard:** Basic 10/20 standard.
- **Funding Project Code:** 9GQ

AMC LCMCs induct some equipment for Reset in Theater

Commodity Considerations

Care and Maintenance of Materiel On Hand

Rapid Technological Obsolescence/Washout of Equipment On Hand

Magnitude and Complexity of Medical System

Lifepak 10

Zoll Defib

Most medical materiel / \$ is in SKOs, and not major end items

Challenged by low density / high complexity equipment; requires maintenance specialists

Commercial products; no one market for pharmaceutical, medical surgical, dental, lab, vet, etc.

Quality control (potency dating, sterility, temp control) makes reuse challenging

Low materiel readiness is common, units scramble to deploy/Reset

Only 1 Medical Repairer per BCT; DOLs have no Med Maint capability

Medical Reset Strategy

FY09 Equipment/Set Induction and Reset at Home Station Line Item Number (LIN)-based strategy

❖ Unit:

1. Claims / executes Reset plan using Automated Reset Management Tool (ARMT)
2. Redeploys to home station with all medical equipment
3. Conducts Field Level Reset (IMSA) on 8 LINs/21 NIINs (variants)
Involves mostly expendables / durables; low potential for Recapitalization (next slide)
4. No in-theater Reset induction; continue home station induction at Reset Fielding
5. Only LINs deployed/redeployed to OIF/OEF and validated through ARMT are eligible for Reset
For example, 7 Trauma Sets O/H, but only 3 deploy; 4 Trauma Sets do not deploy, therefore ineligible for Reset
6. Units exercise core capability to line item requisition select LINs (i.e., Sick Call Sets) from their IMSA

❖ USAMMA:

1. Provides disposition instructions to redeploying units via ARMT
2. Conducts Sustainment Level Reset (USAMMA) of 84 LINs/177 NIINs (variants)
Based on complexity and potential for Recapitalization
3. Conduct Reset of Sustainment LINs at home station
4. Provide disposition instructions for old sets / equipment and induct recapitalization items back to depots for refurbishment
5. Reset Sustainment-level LINs to latest equipment using new and recapitalized items

All redeploying units (BCTs, Enabling BDEs, and IBUs) Sustainment and Field Level Reset done by LIN, regardless of unit type or compo

Compo 1 Sustainment Medical Reset Timeline

Medical Reset (Compo 1):

Simultaneous Equipment/Set
Induction and Reset-Fielding/DX
at Home Station

As of: 13 Feb 2009

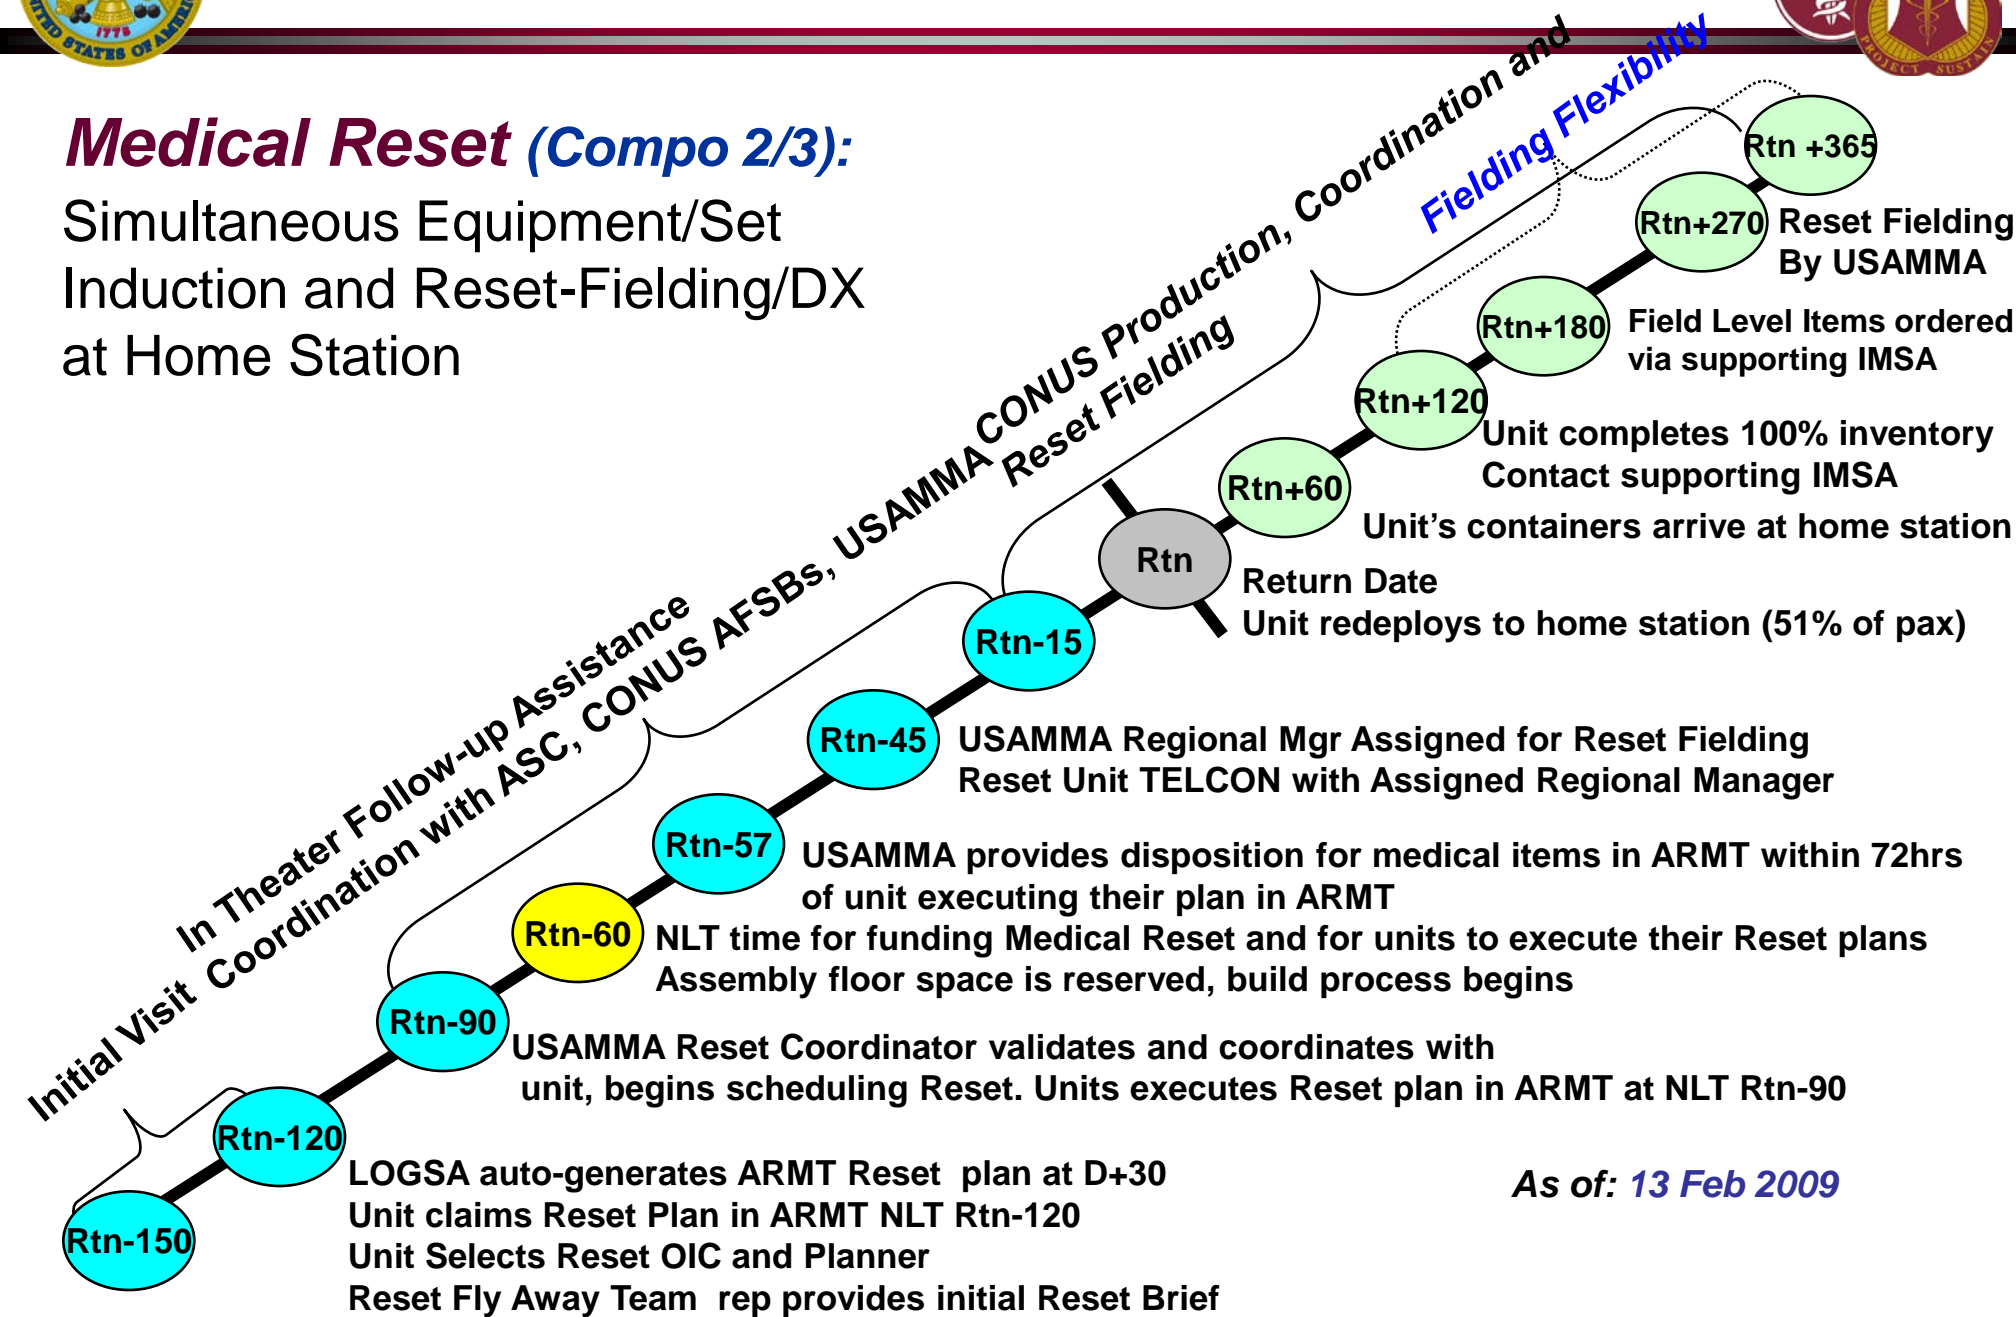

Compo 2/3 Sustainment Medical Reset Timeline

Medical Reset (Compo 2/3):

Simultaneous Equipment/Set
Induction and Reset-Fielding/DX
at Home Station

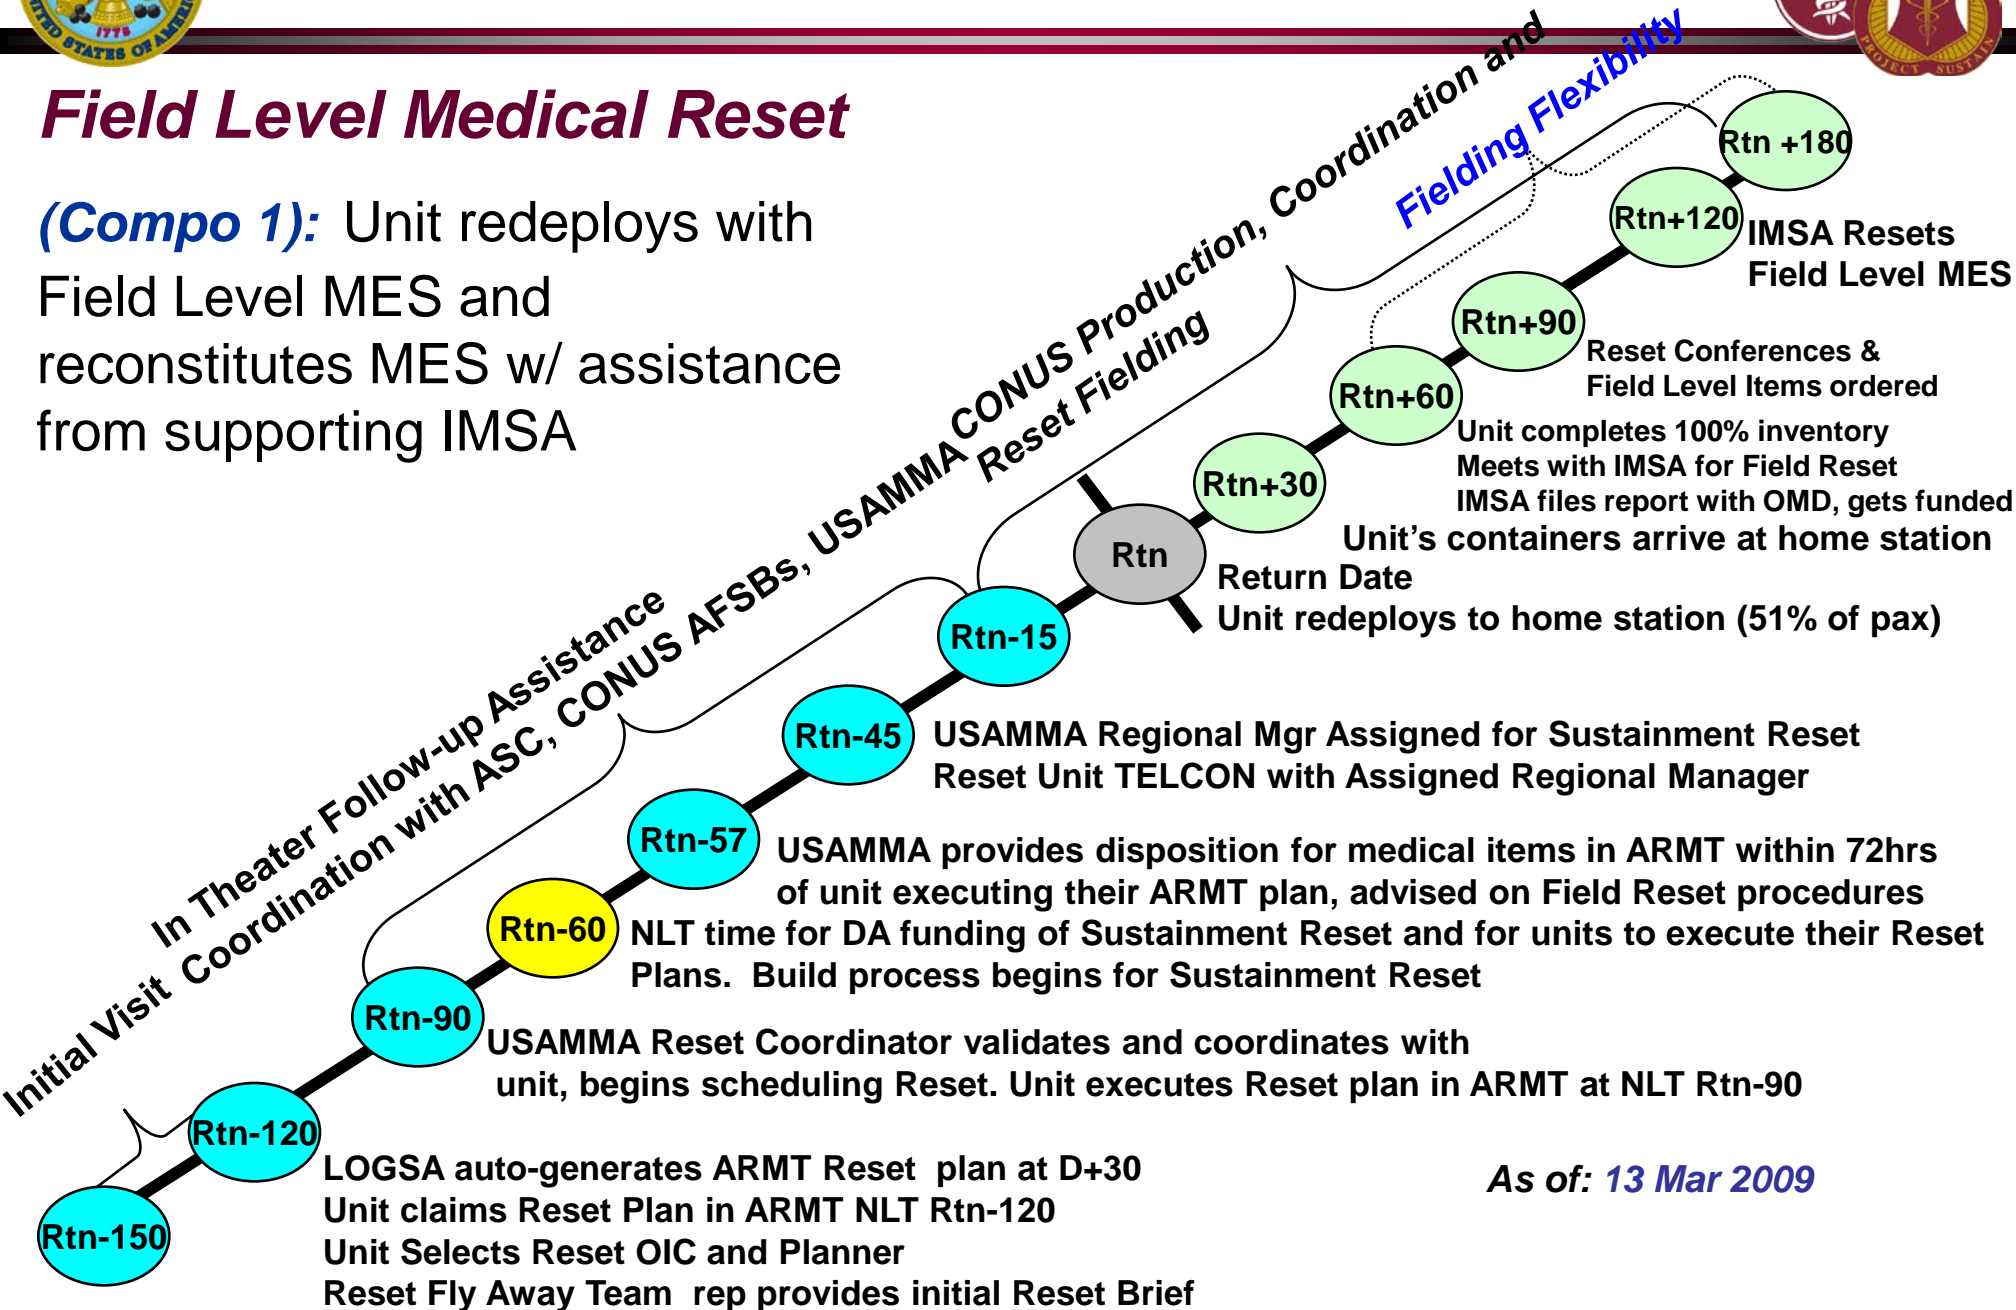

Compo 1 Field Medical Reset Timeline

Field Level Medical Reset

(Compo 1): Unit redeploys with Field Level MES and reconstitutes MES w/ assistance from supporting IMSA

As of: 13 Mar 2009

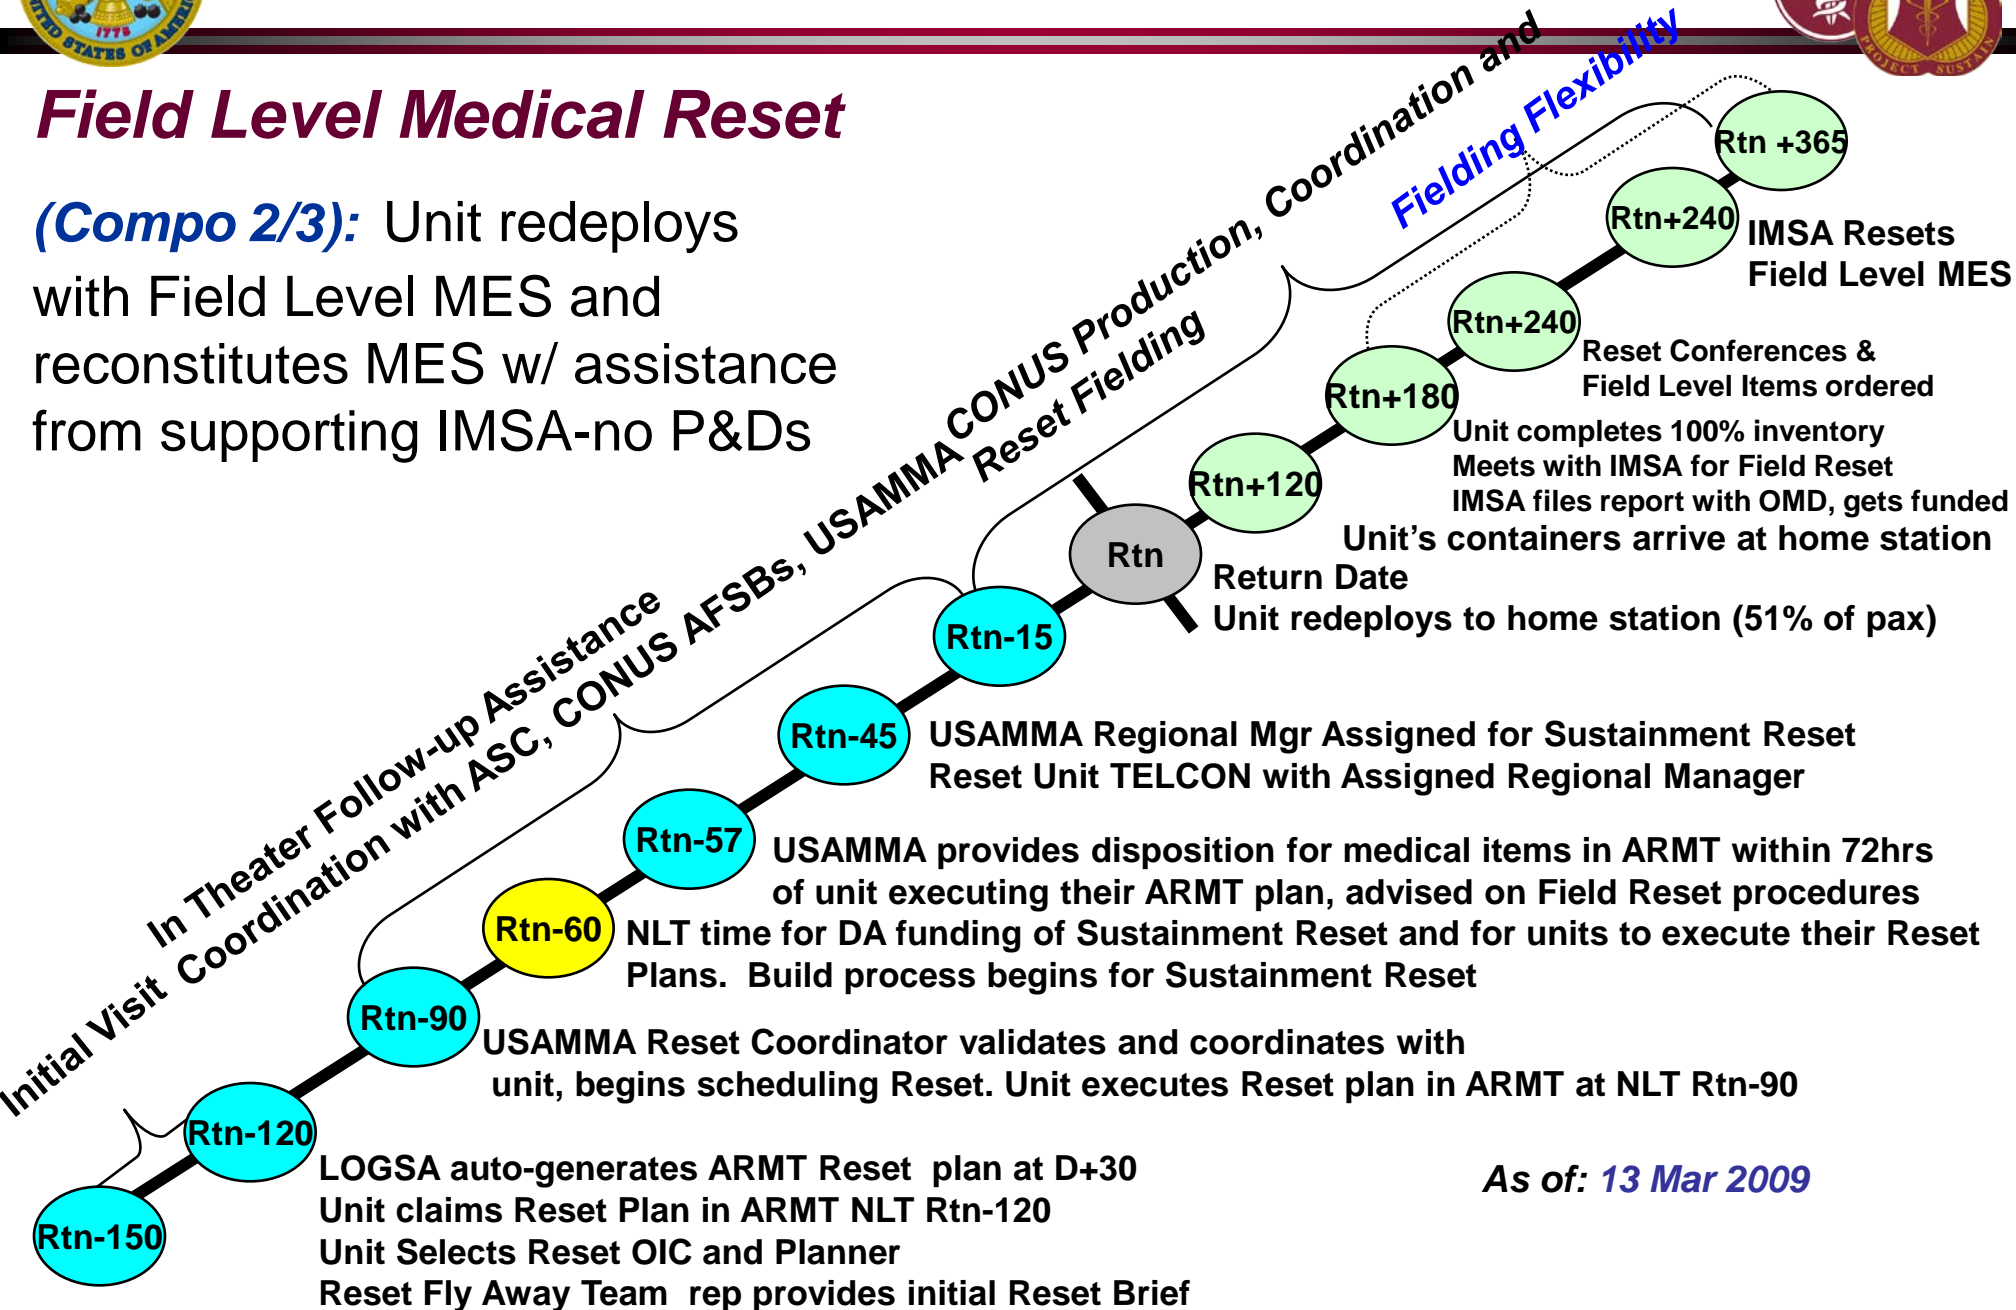

Compo 2/3 Field Medical Reset Timeline

Field Level Medical Reset

(Compo 2/3): Unit redeploys with Field Level MES and reconstitutes MES w/ assistance from supporting IMSA-no P&Ds

As of: 13 Mar 2009

Medical Reset Summary

Medical Reset Strategy will...

- ❖ Synchronize OTSG/MEDCOM with ARFORGEN Model
- ❖ Synchronize USAMMA with AMC/ASC as another supporting Life Cycle Management Command
- ❖ Integrate with AMC's system (ARMT), teams (AFSBs/LSEs) and processes
- ❖ Reduce the burden on the units and Installation Medical Supply Activities (IMSA)
- ❖ Provide the highest state of readiness by resetting units with the current medical equipment capabilities
- ❖ Track and manage processes for accountability, speed, quality, and cost-effectiveness
- ❖ Evolve business rules and processes into a single ARFORGEN focused medical equipping forecasting process
- ❖ Prepare units for future contingency operations

Conclusion

Medical Equipment Reset is an evolving part of a larger ARFORGEN process. As an LCMC, USAMMA will continue to work and coordinate with ASC to further refine these and other ARFORGEN equipping processes and procedures.
